Report of the directors

The directors present their report and the abbreviated accounts of the company for the year ended 31 December 2010

Principal activities and business review

The principal activity of the company during the year was that of arable farming

Business review

The company continues to pursue the goals laid out in the business plan, which include improving yields of the various crops by best practice methods, and reducing costs using economies of scale wherever possible and by strict numerical comparisons and control. Improving present holdings and areas of focus are under constant review. The policies set out by the Board are implemented by the Finance department which is closely supervised in this respect. The Company is exposed to various risks as defined below

Price risk

As part of the nature of agriculture we are subject to price variations, but look actively to manage this risk by taking advantage of future contracts where appropriate while maintaining some inventory to allow us to benefit from price rises, and ensuring good storage facilities to benefit when prices drop and we need to hold on to stock

Credit risk

In view of the present economic downturn the company is making every effort to minimise exposure to customer credit risks and all appropriate steps are taken to reduce this risk

Liquidity risk

The directors actively monitor the company's debt finance in order to ensure that it has sufficient available funds for current and planned future operations

Interest/currency rate risks

With the present banking interest rates being so low there is a risk that the company does not make the best use of surplus cash and therefore every effort is being made to review all options that would bring the highest rates possible. Forward dealing facilities are also being explored in regards to foreign currency accounts

Key performance

Monthly detailed reporting analysis is based on the company meeting agreed hurdle rates in regards to Return on Investment and Internal rate of return and then being accountable for variances by farm

Results and dividends

The profit for the year, after taxation, amounted to £1,416,513. The directors have not recommended a dividend

Deferred tax assets are recognised only to the extent that the directors consider that it is more likely than not that there will be suitable taxable profits from which the future reversal of the underlying timing differences can be deducted.

Deferred tax is measured at the tax rates that are expected to apply in the periods in which timing differences reverse, based on tax rates and laws enacted or substantively enacted at the balance sheet date.

Foreign currencies
