7 Taxation (continued)

b) Factors affecting tax charge/(credit) for the year

The tax assessed for the period is higher than the standard rate of corporation tax in the UK (30%). The differences are explained below:

	2006 £⁴000	2005 £'000
Profit/(loss) on ordinary activities before tax	925	(963)
Tax at 30% (2005-30%) Factors affecting charge/(credit) for the year	278	(289)

Adjustment to tax charge in respect of previous year	-	31
Other items	<u>.</u>	(4)
Current tax charge/(credit) for the year (as above)	372	(214)

c) Factors that may affect future tax charges

Excluding the impact of exceptional items and assuming the current level of profitability continues the anticipated future effective rate of tax for the company will be approximately 40% representing a current year tax charge calculated as the UK nominal rate of tax (2006 30%) multiplied by the accounting profit or loss for the year plus the non-deductible amortisation of goodwill (2006 £0 2m) and other permanent items

The UK budget announcement of 21 March 2007 included a number of changes to the UK tax rules to be phased in over the financial years 2008/09 - 2010/11 (inclusive). The announcements that will have the most immediate impact to UK companies are the reduction in the rate of UK corporation tax from 30% to 28% and the reduction in tax allowances on plant and machinery from 25% to 20% (plant) and 25% to 10% (building fixtures) for the 2008/09 financial year, followed by the phased abolition of tax allowances (4% pa) on buildings used for an industrial use. As at the balance sheet date these changes have not been substantially enacted and hence the deferred tax has not been restated to reflect the reduced tax rates and allowances that have been proposed
