1. *Chlorophyll *a** was determined in 100% methanol extracts of the leaves and stems of the plants. The absorbance of the extracts was measured at 663 nm using a Shimadzu UV-1601 spectrophotometer. The concentration of chlorophyll *a* was calculated using the following equation: $\text{Chlorophyll } a \text{ (mg g}^{-1}\text{)} = 12.7 \times \text{Absorbance at } 663 \text{ nm}$.
