Further guidance

Guidance on striking off is available from our website.

1. The first part of the report is a general description of the project. It includes the title, the objectives, the scope, and the methodology. The title is "The Effect of Temperature on the Rate of Reaction of Hydrogen Peroxide with Potassium Iodate". The objectives are to determine the effect of temperature on the rate of reaction and to determine the activation energy of the reaction. The scope is to study the reaction at temperatures between 10°C and 30°C. The methodology is to use the method of initial rates.

2. The second part of the report is a description of the experimental procedure. It includes the list of materials, the list of apparatus, and the description of the procedure. The materials are hydrogen peroxide, potassium iodate, sulfuric acid, and sodium metabisulfite. The apparatus are a conical flask, a stop clock, a thermometer, and a water bath. The procedure is to prepare a series of solutions of different concentrations of hydrogen peroxide and potassium iodate, and to measure the time taken for the reaction to occur at different temperatures.

3. The third part of the report is a description of the results. It includes a table of the results, a graph of the results, and a discussion of the results. The table shows the time taken for the reaction to occur at different temperatures. The graph shows the logarithm of the rate of reaction versus the reciprocal of the absolute temperature. The discussion shows that the rate of reaction increases with temperature, and that the activation energy of the reaction is 50 kJ/mol.

4. The fourth part of the report is a conclusion. It summarizes the results of the experiment and states the conclusions. The conclusions are that the rate of reaction increases with temperature, and that the activation energy of the reaction is 50 kJ/mol.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (○), 10⁷ cells/ml (□), 10⁸ cells/ml (△), and 10⁹ cells/ml (◇). The error bars represent the standard deviation of three independent experiments.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The number of transformed cells was determined by the number of colonies obtained on the selective medium. The results are the mean of three independent experiments. Error bars represent standard deviation.
